Networking and Voice-Over IP

Communicate more effectively by reaching the right resource the first time. Now your business can deploy an affordable, easy-to-manage unified communications system from Cisco. It eliminates multiple servers and combines voice, data, voicemail, automated attendant, video, security, and wireless capabilities. It also integrates with existing desktop applications such as calendar, e-mail, and customer relationship management (CRM) programs.

Servers and Storage

With the right infrastructure, your IT group should be able to meet any business demand. A powerful, flexible infrastructure from HP can enable your business to expand securely and help drive efficiencies. RealWorld offers an extensive selection of HP servers, storage and related services for your enterprise. The BladeSystem provides a modular infrastructure to save you both time and money.

Rugged Wireless Solutions

In today's just-in-time business environment, people cannot wait days for manual data entry to occur. RealWorld's line-up of world-class mobile wireless data collection terminals, vehicle mount computers and access points deliver rugged, real-time tracking of your company's product and people.

Barcode Printers and Labels

Printing barcode labels in a manufacturing environment is critical. After all, if you can't ship the product – you can't invoice the product. Our smart printers cover every type of workload from low volume jobs to rugged 24/7 RFID applications. Service and maintenance contracts ensure that your printers are always in working order.

RFID

Radio Frequency Identification (RFID) is one of the fastest growing and most disruptive technologies being adapted today. Standards, mandates and ROI are all key reasons for the move. RealWorld Communications recognizes the challenges associated with implementing an RFID project and can provide key solutions including pilots.
